MOTORTREND.COM I was going to change the transmission fluid for the first time, but when I pulled the plug, the fluid was reddish and smelled like automatic transmission fluid. I always thought that manual transmissions used gear oil. What fluid should I be using There was also a Muncie fivespeed that was used less often on the 92 Sseries with 5W30 motor oil. To confirm the transmission were dealing with, take a look at the regular production option code ticker that should be located in the glovebox. The codes ML3, ML2, or MW1 will confirm the Borg Warner fivespeed and the use of Dextron II as the appropriate lubricant. In the past, heavy gear oil was the norm for manual transmissions, but todays engineers have found advantages in the use of less heavy lubricants ATF and 10W30, 5W30 motor oil in passengercar and lighttruck applications. I was thinking all thats available now is Dexron III and maybe IV. Anyways its for a 1991 S10 4X4 5 speed manual. <http://implant-bor.ru/filippov/files/1601625330.xml>

- 1.0.

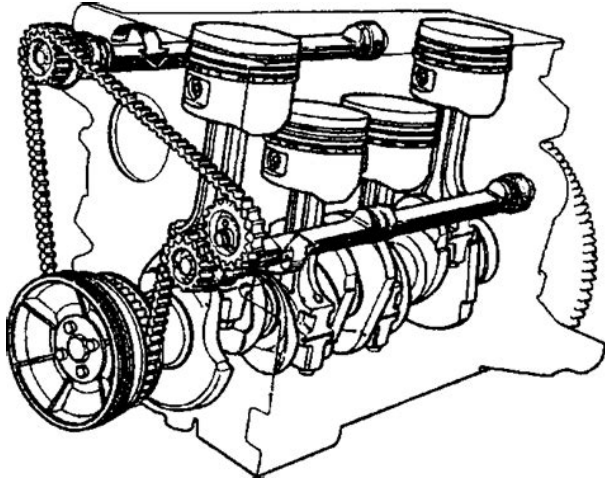

Think Im going to try to make sure its topped off or change the fluid. It struck me as a surprise, I would think a gear oil like used in the rear differential is what youd use in a manual transmission gear box. Sometimes NE of Bagdad. Dex 3 is petroleum based and dex 6 is the newest and it is synthetic. Do they even make this stuff anymore. I was thinking all thats available now is Dexron III and maybe IV. Anyways its for a 1991 S10 4X4 5 speed manual. Think Im going to try to make sure its topped off or change the fluid. It struck me as a surprise, I would think a gear oil like used in the rear differential is what youd use in a manual transmission gear box. Some manual boxes specify automatic transmission fluid. You could probably load it full of gear oil or other lubes, and it would be fine. But it might shift like crap, or be awfully stiff in cold weather, or crash gears. Better to just use the right stuff to begin with. Use the newest Dexron fluid. Some manual boxes specify automatic transmission fluid. You could probably load it full of gear oil or other lubes, and it would be fine. But it might shift like crap, or be awfully stiff in cold weather, or crash gears. Where I got my info was from an old Hayes manual i happened to have sitting around. Ive just noticed my gear box is less noisy cold than when warmed up. Think Im gonna try topping it off or changing the fluid all together. Sometimes NE of Bagdad. But I did pull out the owners manual to my 1993 S10.it states that manual transmissions with the RPO codes ML3 and MW1 used Dexron and RPO code MY2 used the synchomesh.on the RPO sticker of my 91 it says the truck came with an MY2 transmission. So I guess its off to the stealership I go. It is free and quick. Additional giveaways are planned. Detailed information about all U.S. cities, counties, and zip codes on our site Citydata.com. Chevrolet recommends replacing the transmission fluid in the fourspeed automatic every 15,000 miles. Raise the front of the S10 with a floor jack. Sit jack stands under the frame rails and lower the S10 until only the stands support it. Crawl under the S10 and place the drain pan under the transmission pan. Remove the bolts from the front and both sides of the transmission pan, using a ratchet and socket. Loosen the rear bolts on the transmission pan only about four turns. Pry downward on the transmission pan with a flathead screwdriver to free it from the transmission, allowing the fluid to drain from the transmission pan into the drain pan. Once the fluid stops draining, hold the transmission pan up and remove the rear transmission pan bolts. Pull the transmission pan down and pour any remaining fluid from the transmission pan into the drain pan. Remove the transmission pan gasket. Scrape any debris from the mating surface on the transmission, using a plastic gasket scraper, and wipe it with a clean, lintfree shop cloth. Grab the transmission filter and pull it downward to remove it. Insert the new transmission filters neck into the transmission and press upward until the filter seats into place. Clean the mating surface on the transmission pan, using a plastic scraper and clean, lintfree cloths. Remove the magnet from the transmission pan and clean it with a clean, lintfree cloth and parts cleaner. Hold the transmission pan over the drain pan and clean it by spraying parts cleaner in it. Wipe any heavy sludge from the transmission pan, using clean, lintfree shop cloths. Reinstall the magnet into the transmission pan. Place a thin bead of silicone on the transmission pan mating surface.
