Animania is a game-changer for passive animals in Minecraft - it introduces diverse genders, breeds, and new mechanics that make caring for them a challenge. Now, these critters need regular feeding and watering, and they've got specific requirements before they can breed. And let's not forget the fresh models and textures! In the meantime, you can spice up your Caves experience with Yung's Better Caves mod - it'll transform those dull tunnels into massive caverns with lava lakes and flooded caverns! If you're eagerly awaiting Minecraft 1.17's update to Caves, give this a try. But that's not all - Yung also created the Better Mineshafts mod, which breathes new life into Minecraft's Shafts by introducing unique designs, varying materials based on biomes, and larger spaces with extra loot-filled rooms. Biomes o' Plenty is another must-have, adding over 50 new biomes to your world for a more diverse and exciting experience. And, as an added bonus, you can climb the thinner branches! Galacticraft is another massive mod that lets you explore new planets and moons, while the Gravestones Mod ensures your items are safe even if you die. Last but not least, HWYLA (Here's What You're Looking At) is a super useful mod that adds a handy interface when hovering over blocks or entities in Minecraft - it's like having a personal guide at your fingertips! It shows the Item ID, the name of the item, the mod it comes from and other useful information.
