

I'm human

The 4L60E is a series of automatic transmissions produced by General Motors, designed for longitudinal engine configurations with four forward gears and one reverse gear. The transmission was electronically commanded and evolved from the Turbo-Hydramatic 700R4, which was replaced in 1993. The 4L60E uses a specific input shaft size depending on the application, and its torque capacity is up to 360 ft·lb (490 N·m). It has a unique bell housing design with varying bolt patterns for different engine types. The transmission weighs approximately 133 pounds without fluid. The 4L60E family of transmissions uses two shift solenoids to achieve four distinct gear ratios by activating and deactivating the solenoids in a specific pattern. The transmission was used in various GM vehicles from 1993 to 2013, but it was eventually replaced by the 6L80E. The 4L60E is built at several factories worldwide, including Toledo Transmission in Ohio and Romulus Transmission in Michigan. A video discussing various case changes and differences in 4L60E transmission variations since 1993 is available online. Here's a list of some notable models with the 4L60E transmission: * S-10 Trucks (1993-2000) * G-Van (1993-2000) * K-Truck (1993-2000) * L-Van (1993-2000) * Other GM vehicles Note that this list is not exhaustive, and the 4L60E transmission was used in many other models over the years. * M-Van: 3.0L * L-Van: 3.0L * S-Truck: 3.0L * T-Truck: 3.0L * Corvette: 5.7L * D-Car: 4.4L, 4.5L * B-Car: 4.3L, 4.4L * K-Truck: 4.5L, 5.7L * F-Car: 5.7L, 6.0L Additionally, the text includes various extended cab and standard cab models for C-Trucks and G-Vans. Note that this is a simplified version of the original text, and it's not possible to accurately paraphrase the entire list without losing context or information. The list appears to be an inventory or classification system for various vehicle types, including trucks (S-Truck, T-Truck), vans (L-Van, G-Van), cars (F-Car), and SUVs (Corvette, Yukon). Each entry includes a model number, engine type, transmission, and cab style. The vehicles are grouped by category, with some categories having multiple subcategories. For example, there is a standard cab, extended cab, and police package for C-Truck. The list also includes specific models such as the 5.7L C-Truck, G-Van, F-Car, and K-Truck. The model numbers seem to be sequential, with each number increasing by 1 or incrementing in some cases. The engine types are either 5.3L or 5.7L, and the transmission is typically an automatic. The table lists engine and transmission combinations for various vehicles, including trucks and vans, across different years and models. The list includes engines with codes such as "K-Truck", "H-Van", "T-Truck", and others, each corresponding to a specific vehicle type. The engines are listed in three-digit codes, where the first digit represents the engine family (e.g., 3 for a small-block V6), the second digit represents the number of cylinders or cylinder heads, and the third digit represents additional engine specifications. The transmission combinations include the "4L65E", which is a four-speed automatic transmission. Some vehicles also have hybrid electric options, denoted by codes such as "PKD" or "SDD". The list spans several years, from 2003 to 2008, and covers various vehicle models, including Corvette, C-Truck, K-Truck, M-Van, S-Truck, T-Truck, and others. The table shows engine and transmission combinations for each model year and provides information on specific features such as bed length and cab type. Some notable vehicles included in the list are: * Corvette: listed from 2003 to 2006 * C-Truck: listed from 2003 to 2008, with various cab types and bed lengths * K-Truck: listed from 2003 to 2008, with various engine options and transmission combinations * M-Van: listed from 2003 to 2008 * S-Truck: listed from 2003 to 2008, including Saab 9-7x models Overall, the table provides a comprehensive list of engine and transmission combinations for various vehicles across several years and models. 8KED20084.3L, 8KLD20084.8L, and more. The list includes various K-Truck, T-Truck, Saab 9-7x, C-Truck, G-Van, Avalanche, Tahoe, Van, Yukon, S-Truck, H-Van, and H-Truck models, with specifications such as engine size (4.3L, 5.3L) and transmission type (4L60E). The text also provides information on how to determine the differences between 1pc and 2pc style bellhousings for the 4L60E transmission, including photos that demonstrate these differences. Additionally, the article discusses the Neutral Safety Switch and its functionality in relation to the 4L60E transmission. If readers have any questions or concerns, they can contact the Tech Support Team at 800-708-0087 ext. 2.
