Engineer of the main software, technologist, agile followers, Google Developer Expert Certified Scrum MasterQueere are proven benefits of torque programming that you and your team can take advantage of. I was the programming coupled here and there for a few years now. I have a couple programmed with senior engineers and junior software engineers for me. Every time as the programming of couples I learned something new from the other person regardless of the programming experience of my colleague. I think you and your team can also collect these rewards of pair programming, it started. How is the programming of couples? Couple programming is considered an agile software development technique where two people write together the code on a single machine. It is automatically a very collaborative and learning experience. There is a lot of communication between the couple as it needs to plan and discuss the code on the flight. If you didn't match, then you have to try it once to know what we really like. Basically, imagine writing a single line of code and another software engineer is next to you thinking and guiding you through why and how to that line of code. It is a great activity for a couple of software engineers. Styles of Pair ProgrammingThere are more torque programming styles, I think the most popular one is "œDriver and navigator". I did this style of programming of couples with my elders and software engineers less experienced than me. Below is a quick rundown of styles. Drivers and navigator: the driver is on the keyboard, writes the code focused on the small target at hand while the code of the navigator over-the-go revisions and keeps an eye on the larger image. Roles of the driver and navigator switch in a defined amount of time as every 30 minutes. PONG PONG: Software engineer A writes a fall test, Engineer B software writes the implementation to let it pass. And the cycle goes on, it is fantastic for the development guided by the test (TDD). You can read more programming styles in this amazing post on Martin Fowler's website ", stacked. Benefit engineering is a team sport. As while playing sports, even in software engineering if a team member is injured or not performing well the entire team gathers to help that member. In this particular case, we are more interested in the couple who work together well to come to a better solution than a person who does. With this in mind, we jump into the benefits of making a programming couple that your team should know. Proves Productivity and Knowledgegwen Two people couple program on a certain task as they say that two heads are better than one, I think it is a more productive work episode. fmeets a road bump the navigator and helps to solve the problem. In addition, it can really help you share knowledge of the system parts, the other software engineer is not very aware of. For example, in January of this year, the copies programmed with my colleagueMicroservice I had never worked. If I had to do the task alone that it would take me days but while it was much more expert than me in that service we could get the task done in 1 day. They were better productivity objects like me knowing that new system. With all those benefits included, there is another additional advantage of the owner of the collective code as we did together. Revised Programming Ancneas Couple involves 2 code writing engineers for the same task at the same time on a single computer the code is revised on the move. Because the driver is writing the code, the navigator is reviewing it almost in real time and also thinking of any project, issues related to architecture and possible bugs. It is much better than a revision of the asynchronous code because both software engineers have already familiarized with the task and problem in the context and know if the code works or not at the same time. I remember my couples programming session with our leader developer a few years back, where I was writing the code and was giving a very significant feedback while he was writing the code. This has made the audit process later much easier and with very little friction than solitaire. Smart aspirations. You can't do your job because it is blocked by another task done by one of the software engineers in your team. Rather than waiting for the Software Engineer to end that the block task helps them with the couple programming together. In the end, his team success or goals that count more than individual. Create that synergy and help your teammate get the task made the programming of the fastest torque that in turn is unlocked to you too. Junior Software Engineer for the above reason, it was a great experience and I also learned a couple of things from him. Even the flythis is probably a very weakened advantage of the pair programming. During the torque programming, look at the other software engineer and learns many things on the fly. While traveling, you collect how the other engineer uses keyboard shortcuts or tools you were not to know. This is really useful when mating the program with someone elderly to you, you know their routine and how they use the same tools most productive. Again returns to my couple programming experience from January 2020, I learned that $\hat{A} \in \hat{a}, \sim \hat{A}$ "Ctrl + $\hat{A} \in \hat{a}, \sim$ on CLI sends you to the end of the line and my friend has learned to -ae -b params in GREPÀ \in To show lines after and before combining the text. Some years I learned more selections in ide in one of the couples the programming sessions I had. So just a couple program to learn more about Go.Great Onboarding for the new MembersPair programming be one of the tools to make better the process of your company and team for the process of software engineers for software engineers. If new team members can have a good pair programming session with one of the experienced team members who will have known system details much faster andTeam members will be familiar with the service, tools and the way to work in a more practical way than simply read or hear about it. I remember to make a couple programming session with one of the new software engineers a couple of years and he was amazed by the way we wrote tests and how strict the code review process was. The course of the Council, the programming of couples is not all rosy, there are negatives to it. Some of the challenges associated with the programming of the couple are the exhaustion related to it. Paring forces to focus for longer periods of time, find a common ground and share a good wavelength with the other software engineer. This is intense and makes you tired quickly. Remembering my first programming experience of the couple, it was very tiring after that 2-hour session. So doing a long-hour programming couple is not really productive in my opinion. Sometimes being in very different skill levels can be another disadvantage as it would be quite difficult for an older engineer with a decade of experience and a junior engineer to mate if the senior Engineer is not open to it. Agreeing is a very important part of the programming of the couple, you should not simply pair the program randomly with any team member.Conclusion's study at the University of UUTHAH on the costs and benefits of programming of couples sums up that while you are caught with the Digitato programming of a later stage. It also underlines that the designs are better and the code length is shorter among the other results. A good explanation of this study can be found in this post by Milandharã on Dev.to. All in all, from my experience as well as in the above study, the benefits of couples programming certainly exceed the cost. It should be one of the tools you can use when needed to make you a better software engineer. Join Hacker Middyay of Lifestyle Blogger Geneva Vanderzeil never remains long. It does not call not one but two places at home "Hong Kong and Australia" \in and its recent trips include visits to culturally rich clubs such as Spain and Thailand (which meticulously documented on its website a couple and a spare). With its impressive collection of passport stamps, we knew Vanderzeil was the perfect person to share the perfect day in Hong Kong with our travel obsessed Instagram followers. He delivered, offering privileged recommendations for where to eat, shop and take everything when your feet begin to hurt. Keep seeing the whole itinerary. Before things: fuel for the day at Cafe Mido. Meander through the city flower markets for yourdaily nature (and a new bouquet to brighten up your airbnb). The Bird Gardens offer an unexpected decorative Inspiration.Vanderzeil Loves exploring the streets of Mong Kok, one of Hong Kong's main shopping areas.The Ferry Star will take you to Hong Kong Island, but the boat trip itself is just as exciting as the destination.fish and meat are all of quality ingredients, which you will enjoy in the most cozt of spaces.The more the more The view is located at the end of the run of the top tram. For Chic Home Modiserie, take time to visit Ap Lei Chau Island.Finish the day with a well-deserved refreshment at the restaurant on Limewood Beach. SERVA.DE/FLICKR/CC BY 2.0 Your sneakers are your canvas. It's up to you to decide which style of the shoe is best suited to the image you want to create. White sneakers are the easiest to customize. Choose a sneaker made of leather or vinyl. You can also use a sneaker on canvas but it could prove a much more complicated surface for a beginner. Unless you are familiar with the many different types of paints and how they are applied to different surfaces, empty the canvas for now. Here we will use white leather sneakers as in the photo above. Duaa Awchi / Eyoom / Getty Images Before you do anything with those custom kicks, it's best to come up with a rough sketch of your plan. Draw an example of what you want to create on paper or use a computer program such as Photoshop or Illustrator. This will help you to better visualize your sneaker masterpiece before you start working with permanent paints. Creating a rough sketch is extremely important because you are working with a pair of shoes as canvas. You want to make sure that both shoes are designed to look identical to them being a pair of custom kicks. Jackf / Getty Images Now that you have an idea of the image you want to create and the colors you need, it's time to choose your paints. Paint markers are usually a very good option for custom sneaker projects. These can be found at your local art supplies store or online. If you go to an art supply store, you can usually test paint markers before purchasing them. Some markers release a very weak varnish and some are extremely watery. These types do not work well for sneaker art. Make sure the chosen markers have the consistency more often for the best results. Paint markers are available in various sizes: grease for lean. Based on your sketch, choose the appropriate tip size for your image. You want to be able to control lines, fill the space and define the curves. The thinner the tip, the easier it will be to draw the details and get to those hard-to-reach spaces. The more often, more paint that can spread over large areas. The spray paint can also be used. However, if you use spray paint as a base, make sure you get skinny caps to keep the aerosol from the cover detail you want to show off. Spray cans are harder to control and better used on large canvases. Beginners are encouraged to use spray paint for their sneaker project Take our advice and stick to paint markers if perfection is what you are looking for. Finally, you might want to take a can of Clearcoat. This is entirely optional, but it could be useful to extend the duration of your artwork. It can provide a barrier against potential cracking that can occur if custom sneakers are worn too much. Image Cortetty of Blue Panther If you want to apply a useful material before you outline your sneaker, sneaker.It makes a product called a workable fixative. This spray allows you to create your profile using a pencil. If you config when creating your scheme, you can easily delete your error and move on. Carefully create a contour of your design on your sneakers. Make sure that the contour on one sneaker matches the other. It is good to use a very thin fine brush to outline if you have stable hands. Otherwise, you should use a fine point indicator for this step. A permanent marker, like a sharpie, works well to innate. Once you have your side, place your sneakers side by side. Do you make the outer heels, the inner sides of the sneaker and the toes all look well defined and symmetric? Once everything looks OK with your artwork outlined you can switch to color. Debra Roby / Flickr / CC by 2.0 This is the fun part! Let your creative juice flow while you take control of your canvas. Using the selected colors for paint markers, start coloring in your piece. As a beginner, we hope you have selected a very simple design for the first time. Otherwise, then save the darkest colors last so you can cover any bleeding or flaws towards the end. Once you are through painting, it is recommended to allow a significant time period for drying. There is a lot of discussion in the world of sneaker customization on how long you should let your sneaker work dry. Usually, three or four days is an adequate amount of time to allow paint to bind and cure properly. Make sure the area where you like sneakers during this period is at room temperature and free of moisture. If you bought a can of Aerosol Clearcoat, apply it to your sneaker on the second day of the drying process. Use a very light coating while spraying on each sneaker. You don't want to make any dripping. Shannon Kringen / Flickr / CC BY-SA 2.0 What is the point of creating a masterpiece if you do not see anyone? There are countless online sneaker forums that satisfy sneaker enthusiasts and thousands of sneakerheads who die to see what you created. Some people will also offer to buy them! So go ahead and show your concepts and you will be amazed by the answer. I really think there's a buyer for every art but they won't know about you and your kicks if you leave them home in the dark. dark.
